TURNED UP FITNESS + TURNED UP IN THE KITCHEN

Brand Kit & Canva AI Guide

Reference Guide · Step-by-Step Walkthrough · AI Asset Creation

TURNED UP FITNESS
Parent Brand

TURNED UP IN THE KITCHEN
Premium Sub-Brand

WHY A BRAND KIT IS YOUR MOST IMPORTANT BUSINESS ASSET

Before you create a single piece of content for your app, your social media, or your marketing, you need to lock down your brand identity in one place. Think of a brand kit like a rulebook that every piece of visual content follows automatically. When your colors, fonts, logos, and spacing are consistent across everything — your app, your Instagram, your PDFs, your videos — your audience starts to recognize your content before they even read the words. That recognition builds trust, and trust is what converts a viewer into a paying member. Inconsistent branding, on the other hand, makes a business look unfinished and unprofessional even when the content itself is excellent. This document gives you everything you need to set up your Canva Brand Kit in one session and never have to make a brand decision again — Canva will do it automatically.

PART 01 — BRAND KIT REFERENCE GUIDE

THE BRAND ARCHITECTURE

You have two brands that work together as a system. Turned Up Fitness is the parent brand — the house that everything lives inside. It owns the workout identity — strength, power, discipline, transformation. The black panther mascot holding dumbbells communicates intensity and capability without intimidation, which is exactly right for a 40+ audience that wants to feel capable, not overwhelmed. Turned Up In The Kitchen is the premium sub-brand — it lives inside the Turned Up Fitness ecosystem but has its own visual personality. The chef panther with vegetables on the cutting board communicates health, skill, and cultural pride. Together they form a complete brand story: we build your body and we fuel it properly.

COLOR SYSTEM — COMMIT THESE TO MEMORY

Every single piece of content you create should use only these colors. This is non-negotiable for brand consistency. Canva will store these in your Brand Kit so you never have to look them up.

Primary Red — Turned Up Fitness
#C0392B
Primary buttons, headers, accent lines, call-to-action elements. The dominant brand color.

Near Black — Primary Background
#0D0D0D
All background panels, cards, and dark sections. Deeper than pure black for a premium feel.

Charcoal — Secondary Background
#1C1C1C
Card backgrounds, secondary panels, and any surface that sits on top of the primary black.

Dark Gray — Borders and Dividers
#2C2C2C
All border lines, dividers between sections, and subtle structural elements.

Mid Gray — Secondary Text
#707070
Captions, metadata, secondary information, timestamps, and supporting text.

Light Gray — Stat Panels
#F0F0F0
Nutritional information panels, data displays, and any content that needs to stand out on dark backgrounds.

White — Primary Text on Dark
#FFFFFF
All main body text, titles, and headings that appear on dark backgrounds.

Premium Gold — Kitchen Sub-Brand
#F5A623
EXCLUSIVELY for Turned Up In The Kitchen content — recipe cards, premium badges, and kitchen-specific headings. Never use on fitness content.

TYPOGRAPHY SYSTEM

Typography is the second most important brand element after color. Consistent font choices make your brand immediately recognizable even without your logo present.

Montserrat — Black (900)
Used for: Brand name, screen titles, phase headers — maximum impact headings only

Montserrat — Bold (700)
Used for: Section headers, recipe titles, workout day labels — strong but not overwhelming

Montserrat — SemiBold (600)
Used for: Navigation labels, tags, badges — clear hierarchy without competing with bold

Helvetica Neue — Regular (400)
Used for: Body text, descriptions, coaching cues — maximum readability at small sizes

Courier New — Regular (400)
Used for: Code snippets, technical specifications — clearly differentiated from marketing copy

LOGO USAGE RULES

These rules protect your brand from looking inconsistent or unprofessional across different contexts. Every designer or AI tool you work with needs to follow them.

Minimum size — Turned Up Fitness logo:
Never display smaller than 120 pixels wide in digital or 1 inch wide in print. Below this size the mascot detail becomes illegible.

Minimum size — Kitchen logo:

Never display smaller than 100 pixels wide in digital or 0.75 inches in print.

Clear space:

Always maintain a clear space around both logos equal to the height of the letter U in 'UP' in each logo. Nothing — text, other graphics, or borders — should intrude into this space.

Backgrounds:

The Fitness logo works on white, black, and red backgrounds. The Kitchen logo works on black backgrounds. Never place either logo on a busy photographic background without a solid color container behind it.

Color modifications:

Never change the colors of either logo. Never make either logo grayscale. Never add drop shadows or effects to the logos themselves — the designs are already complete.

Logo hierarchy:

In any single piece of content, the Turned Up Fitness logo is always the primary logo. The Kitchen logo is supplementary and should be smaller when both appear together.

BRAND VOICE AND TONE

Visual consistency means nothing if your words say something different. These three principles should guide every piece of written content — captions, descriptions, coaching cues, and marketing copy.

Direct and honest:

Speak plainly. Your audience is 40+ and has seen enough marketing to recognize when they are being handled. Say what you mean without hedging. 'This program works for people who show up' is more powerful than 'This program may help you achieve your goals if you are consistent.'

Educated and respectful:

Your audience is intelligent and experienced. Explain the science behind recommendations without being condescending. Saying 'cinnamon improves insulin sensitivity by mimicking insulin at the cellular level' respects their intelligence and makes them more likely to follow the advice than simply saying 'eat cinnamon.'

Culturally aware:

Your primary audience includes people from Georgia and the American South, and you are expanding to serve multiple cultural food traditions. Never write about any cultural food tradition as lesser or in need of fixing. The Southern food culture is not a problem to be solved — it is a foundation to be built on.

PART 02 — CANVA AI STEP-BY-STEP WALKTHROUGH

This section walks you through exactly what to click, what to type, and what settings to choose in Canva to set up your Brand Kit and start generating professional visual assets using Canva's AI tools. You need a Canva Pro or Teams account for full Brand Kit functionality. The monthly cost is approximately 15 dollars and pays for itself immediately in the quality and consistency of assets it produces.

PHASE 1 — SETTING UP YOUR CANVA ACCOUNT AND BRAND KIT

This phase takes approximately 20 to 30 minutes and only needs to be done once. Every piece of content you create after this will automatically reflect your brand identity.

Step 1: Create your Canva Pro account

Go to canva.com and click 'Get Canva Pro.' Choose the monthly plan at approximately 15 dollars. If you plan to collaborate with others choose Canva Teams instead. Use your business email address, not a personal one — this keeps your brand assets organized under a professional identity.

Step 2: Access Brand Kit

Once inside Canva, look at the left sidebar and click 'Brand.' This opens the Brand Kit section. If you do not see it, look for a diamond or crown icon — this indicates a Pro feature. Click 'Add new brand kit' and name it 'Turned Up Fitness.'

Step 3: Upload your logos

Inside the Brand Kit, find the Logos section and click the plus icon or 'Upload logo.' Upload your Turned Up Fitness logo (the white background version — named white.png) first. Then upload your Turned Up In The Kitchen logo. Canva will store both and make them accessible with one click in every design.

Step 4: Add your brand colors

Find the Colors section in Brand Kit. Click 'Add color' and enter each hex code exactly as listed in Part 1 of this document. Add them in this order: #C0392B first (primary red), then #0D0D0D, #1C1C1C, #2C2C2C, #707070, #F0F0F0, #FFFFFF, and finally #F5A623 (premium gold). Label each color with its name from Part 1 so collaborators understand when to use each one.

Step 5: Set your brand fonts

Find the Fonts section in Brand Kit. Click 'Add font' and search for 'Montserrat.' Add it three times — once as Black weight for headings, once as Bold for subheadings, and once as SemiBold for labels. Then search for 'Helvetica Neue' or 'Nunito' (the closest Canva equivalent) and add it as Regular for body text. Canva will now suggest these fonts every time you create a new design.

Step 6: Create a brand style guide template

Once your colors and fonts are added, click 'Create new design' and choose 'Presentation' format. Create a single-slide document that shows your logos, color swatches, and font examples together on a dark background. Save it as 'Brand Reference — Do Not Edit.' This becomes your visual reference for anyone who creates content for your brand.

PHASE 2 — USING CANVA AI TO GENERATE ASSETS

Canva has multiple AI tools built in. Understanding which tool to use for which task will save you significant time and produce better results than guessing your way through the interface.

Step 1: Magic Design — for creating complete layouts from scratch

Click 'Create a design' from the Canva home screen. Then click 'Magic Design' (look for the sparkle icon). Type a description of what you want — for example 'dark red and black fitness app home screen for a 40+ wellness program.' Canva will generate multiple complete layout options. Choose the one closest to your vision and then customize it using your Brand Kit colors and fonts. This is your fastest path to professional-looking app mockup screens.

Step 2: Text to Image — for generating custom photos and illustrations

Inside any design, click the Apps icon in the left sidebar and find 'Text to Image.' This tool generates original images from written descriptions — which means zero copyright concerns. For recipe photos you have not shot yet, type descriptions like 'overhead view of seared scallops on a dark ceramic plate with microgreens, professional food photography, dark moody lighting.' For exercise demonstrations, type 'Black man in his 50s performing a goblet squat with perfect form, gym background, professional photography.' Always add 'dark moody lighting' and 'professional photography' to your prompts to match your brand aesthetic.

Step 3: Magic Write — for generating marketing copy

Click the Apps section and find 'Magic Write.' Use this tool to generate social media captions, email subject lines, and promotional descriptions. Give it context about your brand — for example type 'Write a 3-sentence Instagram caption for a 40+ fitness app promoting a seared scallop recipe. Tone: direct, educated, culturally aware. Brand: Turned Up In The Kitchen.' Magic Write will produce multiple variations. Choose the strongest one and edit it to match your voice.

Step 4: Background Remover — for cleaning up your logo files

If you need a version of either logo without any background for use on different colored surfaces, use Canva's Background Remover. Upload the logo image to Canva, click on it, and find 'Edit Image' then 'Background Remover.' This creates a clean transparent PNG version that will look professional on any background color. Save both logos as transparent PNGs in your Brand Kit.

Step 5: Resize Magic — for generating assets across all formats simultaneously

Once you have created a social media post, an email banner, or an app screen mockup in Canva, click 'Resize' and then 'Magic Resize.' Select all the format sizes you need — Instagram square, Instagram story, Facebook cover, LinkedIn banner, email header — and Canva will generate a version of your design in every format simultaneously, maintaining your brand colors and fonts throughout. This one feature alone can save you hours every week.

PHASE 3 — AI IMAGE PROMPTS FOR YOUR SPECIFIC CONTENT NEEDS

The quality of AI-generated images is almost entirely determined by the quality of the prompt. These are the exact prompts to use in Canva's Text to Image tool (or Midjourney, DALL-E, or Recraft if you prefer those

platforms) for your most common content needs. Copy these exactly and adjust only the specific details.

Exercise demonstration — General:

```
"Black man or woman, early 50s, athletic build, performing [EXERCISE NAME]
with perfect form. Professional gym environment, dark background with subtle
red accent lighting. Sports clothing in black and white. Photorealistic,
professional fitness photography, 4K quality."
```

Exercise — Bad knee modification:

```
"Person in their 50s performing a modified box squat using a high bench,
demonstrating proper knee-safe form. Black gym background, red accent
lighting. Caption area at bottom of frame. Professional fitness photography."
```

Recipe hero shot — Dark and moody:

```
"[DISH NAME] plated on a dark ceramic dish, professional food photography,
dark moody background with dramatic side lighting, fresh herbs as garnish,
slightly imperfect natural plating style. Restaurant quality, 4K, overhead or
45-degree angle."
```

App mockup screen:

```
"Smartphone displaying a fitness app interface with dark red and black color
scheme, health data visualizations, clean modern UI design. Phone held in
hand, blurred gym background. Professional product photography."
```

Brand lifestyle — 40+ audience:

```
"Confident Black man or woman in their late 40s or early 50s, fit and healthy,
preparing food in a modern kitchen. Natural lighting, warm tones, authentic
expression. Not a stock photo aesthetic — real and relatable."
```

Social media thumbnail — Workout:

```
"Bold red text on black background: [WORKOUT TITLE]. Black panther mascot
silhouette on right side. High contrast, aggressive sports typography. Social
media square format 1080x1080."
```

Social media thumbnail — Recipe:

```
"Bold gold text on dark background: [RECIPE NAME]. Overhead food photography
as background, slightly blurred. Premium restaurant aesthetic. Social media
square format 1080x1080."
```

PHASE 4 — AI-POWERED APP DESIGN TOOLS (BEYOND CANVA)

Canva is excellent for marketing assets but has limitations when it comes to building the actual app interface. These three platforms, used in combination with the React framework we built, give you the fastest path to a deployable app without a traditional development team.

Option 1: Cursor AI

Best for: Taking the React framework code we built and extending it with AI assistance — adding new screens, connecting to a database, or building the payment system

Cost: 20 dollars per month

How to use with your framework: Download Cursor from cursor.sh. Open the TurnedUpFitness_App_Framework_V2.jsx file. Ask Cursor to add specific features using plain English — for example 'Add a progress tracking screen that shows the user which week of the program they are on and which workouts they have completed.' Cursor will write the code for you.

Option 2: Glide Apps

Best for: Turning your content spreadsheets and data into a mobile app without writing any code

Cost: Free to 99 dollars per month depending on features

How to use with your framework: Go to glideapps.com. Connect a Google Sheet containing your recipe data, workout data, and user questionnaire structure. Glide reads the spreadsheet and automatically builds a mobile app interface. You then customize the visual design using your brand colors. This is the fastest path to a testable prototype — you can have a working version within a day.

Option 3: Bubble

Best for: Building a full-featured web app with database, user accounts, payment processing, and AI integrations — the closest to a real production app without custom code

Cost: Free to 115 dollars per month

How to use with your framework: Go to bubble.io. The learning curve is steeper than Glide but the result is dramatically more capable. Bubble can handle user authentication, Stripe payments for your membership tiers, a full database for user profiles and progress tracking, and API connections to AI services for the personalization engine. The React framework we built maps directly to how Bubble structures its pages and workflows.
